

User Manual

Step-by-step guide to every module, for every role

Product	ComplytEX — Safety, Compliance & Business Management (SaaS)
Intended readers	Business owners, HR, Safety Officers, Safety Auditors, employees, accounting and CRM staff
Application	https://safety.designerease.com
Document date	3 October 2026
Version	1.0 — reflects the code as deployed on this date

Contents

1. Introduction

- 1.1 What you can do
- 1.2 Before you start

2. Getting started

- 2.1 Register your company
- 2.2 Sign in and sign out
- 2.3 Demo accounts
- 2.4 Roles and start pages
- 2.5 More than one company

3. The screen layout

- 3.1 Account menu

4. Business setup

- 4.1 Company profile
- 4.2 Factories and warehouses
- 4.3 Spaces and emergency exit plans
- 4.4 Assets
- 4.5 Certifications and unions
- 4.6 Employees and roles
- 4.7 My profile and password

5. Safety module (Safety Officer)

- 5.1 Answering a checklist
- 5.2 Adding your own questions
- 5.3 The checklists
- 5.4 Incidents
- 5.5 Grievances
- 5.6 Safety training
- 5.7 Safety Agent (document reading)
- 5.8 Water management
- 5.9 Waste management

6. Audits

- 6.1 Plan an audit (Safety Officer)
- 6.2 Perform the audit (Safety Auditor)
- 6.3 Record corrective actions (Safety Officer)
- 6.4 Close issues one by one (Safety Auditor)

7. Procurement for corrective actions (RFQ)

8. HR & Payroll

- 8.1 Recruitment
- 8.2 Employees
- 8.3 Payroll taxes (Taxes tab)
- 8.4 Generate salary (monthly payroll)
- 8.5 Advance salary

9. Attendance

- 9.1 Employees: check in or out

- 9.2 Kiosk at the gate
- 9.3 HR: the Attendance page

10. Accounting

- 10.1 Dashboard
- 10.2 Accounts Payable (what you owe)
- 10.3 Accounts Receivable (what customers owe)
- 10.4 Banks, deposits, transfers and petty cash

11. CRM

- 11.1 Companies and contacts
- 11.2 Leads
- 11.3 Orders
- 11.4 Communication

12. Tasks, support and other tools

13. Security and good practice

14. Troubleshooting and FAQ

15. Glossary

1. Introduction

ComplytEX is a web application for textile and manufacturing businesses. It brings safety and social compliance, audits, HR and payroll, attendance, accounting, CRM and company setup into one place. Each company (called a **tenant**) has its own private workspace; users only ever see their own company's data.

1.1 What you can do

Module	Main tasks
Safety	Fill in safety checklists (USC-Safe, Fire, Electrical, Structural, Health, Gas, Boiler, Consultant Engagement, DSA, Emergency Power), report incidents and grievances, record safety training, water and waste management.
Audits	Plan audits, let an independent Safety Auditor record findings, track corrective actions, request quotations (RFQs) for fixes, and close audits issue by issue.
HR & Payroll	Job postings, applications, shortlisting, interviews and offers; employee records; payroll tax setup; monthly payroll posted to Accounts Payable.
Attendance	Face-verified check-in/out from a phone or a gate kiosk, with liveness check, work-site geofence and HR review of suspicious entries.
Accounting	Accounts Payable and Receivable, banks, transfers, petty cash, chart of accounts, bank statements.
CRM	Companies and contacts, leads pipeline, sales and procurement orders, phone notes, appointments, segments, campaigns, mailbox and chat.
Business Setup	Company profile, warehouses, factory spaces and exit plans, assets, certifications, unions, roles and user assignments.
Other	Task planner, support tickets, billing and AI credits, AI prompt manager, document-reading Safety Agent.

1.2 Before you start

- Use a recent **Chrome, Edge or Safari**. Attendance check-in needs a device with a **camera** and **location (GPS)** — a smartphone works best.
- The application address is **<https://safety.designerease.com>**.
- Your access depends on your **role** (Owner, HR Manager, Safety Office, Safety Auditor, and so on). If you cannot see a module described here, ask your company Owner to give your role the permission.

How to read this manual

Buttons and menu names appear like **Save** . Steps are numbered. Boxes like this one give extra information; amber boxes are warnings.

2. Getting started

2.1 Register your company

The first person to register becomes the company **Owner** and has every permission.

- 1 Open the application and click **Create an account** on the login page.
- 2 Enter your first and last name, country, cell phone, company name, company email and phone, and your designation.
- 3 Choose what your business is in **Register as**: Buyer, Designer, Manufacturer, Vendor/Supplier, Inspection, Buying Agent or Safety Auditor. (Roles inside your company, such as Safety Office or HR Manager, are given to people later by the Owner.)
- 4 Choose a password, accept the Terms & Conditions and click **Save**.
- 5 A verification email is sent to you. Click the link in it to verify your address.

Email not arriving?

If the verification email does not arrive, your administrator can verify the account manually. Login still works while email delivery is being fixed.

2.2 Sign in and sign out

- 1 Go to the login page, enter your **email** and **password** and click **Sign In**.
- 2 If two-factor authentication is switched on for your account, scan the QR code once with Google Authenticator (or any authenticator app) and enter the 6-digit code.
- 3 You are taken to the start page for your role (see *Roles and start pages*).

You stay signed in for **7 days** on that browser, even if you close it. To sign out, click your initials at the top right, then **Sign out**. If your session has ended, the application sends you to the login page and brings you back to the page you were on.

2.3 Demo accounts

The login page offers demo buttons (for example **Login as Safety Officer**). They sign you into a sample company called *Demo Factory* so you can explore safely.

Account	Password	Opens
owner@demo.example	DemoPass123!	Owner dashboard (all permissions)
safety@demo.example	Welcome123!	Safety Officer dashboard
auditor@demo.example	Welcome123!	Safety Auditor dashboard

hr@, sales@, buyer@, supplier@, designer@, inspection@demo.example	Welcome123!	Their role's start page
--	-------------	-------------------------

Do not enter real data in the demo company.

Demo passwords are public. Your administrator can switch demo accounts off; the demo buttons then disappear and demo logins are refused (the demo data is kept).

2.4 Roles and start pages

Role	Start page after login	Typical work
Owner	Owner dashboard	Everything; company setup; roles and permissions
Safety Office / Safety Officer	Safety Officer dashboard	Checklists, incidents, grievances, training, audits, corrective actions
Safety Auditor	Safety Auditor dashboard	Perform audits, record findings, close issues
HR Manager	Dashboard	Recruitment, employees, payroll, taxes, attendance
Inspection, Buyer, Supplier, Designer	Their portal page	See note below

Portal pages

The Buyer, Supplier, Designer, Inspection and Manufacturer portals are currently simple landing pages with quick links. Suppliers respond to quotation requests from the *Supplier RFQs* page (chapter 9).

2.5 More than one company

If your email belongs to more than one company, you are signed into the first one. The system supports switching between companies, but there is not yet a menu option for it; ask your administrator if you need this.

3. The screen layout

Most work happens in the main application screen (for example the Safety Officer dashboard). It has five areas:

Header (top)

Logo and page title · module icons: **Safety, Accounting, HR & Payroll, CRM, Tasks, AI, Support, Email, Chat, Report, Tracking, Check-in, Setup** · panel toggles · Online status · your initials (account menu).

You only see the icons relevant to your role:

Role	Module icons shown
Owner	All
Safety Office, Safety Auditor, Inspection	Safety, Report, Tracking + Tasks, Chat, Support, Check-in
HR Manager	HR & Payroll, Email, Setup + Tasks, Chat, Support, Check-in
Accounts / Finance	Accounting, Email + Tasks, Chat, Support, Check-in
Sales, Buyer, Supplier, Designer	CRM, Email + Tasks, Chat, Support, Check-in

People with several roles see the combined set. A role with an unrecognised name sees all icons.

Sub-toolbar

The tabs of the module you opened. For Safety: USC-Safe, Fire, Electrical, Structural, Health, Gas, Boiler, Consultant, DSA, Emergency, Training, Incidents, Grievances, Agent, Audits. For HR: Job Posting, List of Jobs, Search Applicants, Shortlisted, Add New Employee, Generate Salary, Attendance, Advance Salary, Taxes.

Left panel — assistants

Built-in assistants (for example *Supervisor*, *USC-Safe Assistant*). Type in **Ask** or attach a file and press **Send** . Assistants answer from built-in rules and checklists.

Working area (centre)

The page you are working on. Pages from other modules open here, so you rarely leave the dashboard.

WIP panel (right)

"Work in progress": every tab you opened is listed so you can jump back. Click **X** to remove an item.

The **<|** and **|>** buttons in the header collapse the left or right panel to give the working area more space. On a phone the layout stacks vertically and the header icons wrap onto several lines.

3.1 Account menu

Click your initials (top right) to see your name, role and email, open **My Profile** , **Change Password** , **Business Setup** , or **Sign out** .

4. Business setup

Open **Setup** in the header (or the account menu → **Business Setup**). The page has the tabs **Company Profile**, **Setup**, **Extended** and **Business Agent**.

4.1 Company profile

- 1 Enter the head-office address (country, state, city, postal code, address lines). This address appears on your invoices.
- 2 Attach the head-office map/location plan and structure/layout files if you have them.
- 3 Fill in total employees, capacity type and quantity, minimum order quantity, sales profit, minimum wage, minimum age and retirement age.
- 4 Tick the products you deal in (Garments, Home Textile), upload your logo (PNG) and add product lines.
- 5 Click **Save Company Profile**. Use **View Sample Invoice** to check how your details print.

4.2 Factories and warehouses

Add each factory (address, map/picture, structure, land area and unit, ownership type) and each warehouse (name, address type, warehouse type, size, address, map and structure files) with **New Warehouse** → **Save**.

4.3 Spaces and emergency exit plans

Under **Spaces** click **New Space** and enter name, type, purpose, floor, dimensions, capacity, ventilation, number of doors and windows, and floor load. Upload a picture, structure picture/drawing and the **emergency exit plan**. Spaces are used for asset locations and safety planning. Each list can be searched and exported to Excel or PDF.

4.4 Assets

Click **New Asset**, enter name, type (Consumable / Non-Consumable), quantity, purchase date and price, supplier, location (space), weight, invoice and picture.

Assets and accounting are linked

If you enter a purchase price greater than zero, an **Accounts Payable** invoice is created automatically for the supplier (use the payment due date for credit purchases).

4.5 Certifications and unions

Record each certificate (type, policy, name, valid from/till, detail, certificate image and logo) and each workers' union (name, description). Keep validity dates current — they are useful evidence during audits.

4.6 Employees and roles

Under **Assign Role to User** you can create a role, select employees and roles, and click **Assign Selected**. Current assignments are listed below. Roles decide what each person can see and do (for example, only roles

with HR management permission can change payroll taxes or enroll faces for attendance).

4.7 My profile and password

Account menu → **My Profile** to change your name, phone, designation and picture; **Change Password** to set a new password.

5. Safety module (Safety Officer)

Click **Safety** in the header. The sub-toolbar shows the safety areas. Your work is saved per company, and the latest answers in each checklist become the starting point for the next audit you plan.

5.1 Answering a checklist

- 1 Choose a checklist tab, for example **Fire**.
- 2 Each question offers **Yes**, **No** or **N/A**. Every question starts on **N/A**; change only what applies.
- 3 Some checklists also have dates, notes, observations and corrective-action fields — fill those in where relevant.
- 4 Click **Save**. Your saved answers reappear next time you open the tab.
- 5 Use **Export to Excel** to download the checklist.

Why N/A by default?

It prevents accidental “No” or “Yes” answers. A question you have not looked at stays clearly “not applicable” until you answer it.

5.2 Adding your own questions

Every checklist has an **Add New Checklist Item** box:

- 1 Type the question in **Checklist Text**.
- 2 Edit the answer options if needed (comma separated, default *Yes,No,N/A*).
- 3 Select the heading it belongs to, or click **+ New Heading** to create one.
- 4 Optional: click **AI Suggest** to get suggested questions for that area.
- 5 Click **Save Item**. The question is added for your whole company and defaults to its last option.

5.3 The checklists

Tab	Covers
USC-Safe	Unified safety and compliance programme (introductory sessions, curriculum, committee, reporting...)
Fire Safety	Smoking controls, housekeeping, egress paths, fire doors, exits, fire-fighting equipment, drills
Electrical	Panels, wiring, grounding, surge protection, emergency lighting
Structural	Columns, beams, floor loading, building condition
Health Hazards	PPE, chemicals, exposure and hazard controls
Gas Safety	Gas storage rooms, piping, leak detection, NFPA guidance

Boiler Safety	Safety programme, design, water source, pressure, temperature
Consultant Engagement	Registration and licences of external safety consultants
DSA	Detailed structural assessment: drawings, site inspections
Emergency Power	Generators/UPS, site plan, egress layout

5.4 Incidents

- 1 Open **Incidents**. The date and time are pre-filled with the current time.
- 2 Choose the incident type (Fire, Explosion, Collapse, Electrical, Chemical, Machinery, Other), severity (Critical, High, Medium, Low), location and department.
- 3 Describe what happened, whether anyone was injured or property damaged, who reported it, and whether an investigation is required (team lead, dates, summary).
- 4 Record the corrective action and status, then save. Incidents can be searched later.

5.5 Grievances

Record worker complaints: date, complainant name and role, grievance type and category, description, priority, assigned person, resolution details and status (starts as *Pending*). Update the record as the grievance is resolved.

5.6 Safety training

Under **Training** enter the training name, what it relates to, date, trainer, description and attendees, then **Save Training**. Search past sessions and **Download CSV** for evidence.

5.7 Safety Agent (document reading)

Under **Agent**, upload a PDF or text file. The agent extracts key facts and creates a **pending proposal**. Nothing changes in your data until you click **Approve**; you can also reject it.

5.8 Water management

Record water purchases (supplier, date, quantity and unit, cost, payment method, invoice number, tank), rainwater collection, water usage by department, discharge quality monitoring, recycling and wastewater. Each list supports add, edit and delete. Invoice numbers must be unique within your company.

5.9 Waste management

Record each waste entry: date generated, category (Organic, Inorganic, Hazardous, Electronic, Paper, Plastic, Metal, Mixed), type, quantity and unit, source, collection and storage method, storage days, warehouse and location.

6. Audits

Audits connect the Safety Officer, the Safety Auditor and (for fixes that need purchases) suppliers. The full process is drawn in the *Business Workflows* document; this chapter shows the screens.

6.1 Plan an audit (Safety Officer)

- 1 Open **Audits** in the Safety sub-toolbar and click **⊕ Plan**.
- 2 Enter the audit name, select one or more audit types (hold **Ctrl** to select several), the audit company and date.
- 3 Click **Save**. The system copies the current answers from the selected checklists into the audit as its question list. Later changes to the checklists do not alter this audit.

The audit list shows status **NEW**, **PENDING CORRECTION** or **CLOSED**. Search, sort by column, page through results, and export to Excel or PDF. **View** opens the verification sheet.

6.2 Perform the audit (Safety Auditor)

- 1 Sign in as Safety Auditor. Your dashboard lists **New Audits**, **Audits with open issues**, **Reaudit** and **Closed Audits**.
- 2 Click **Details** on an audit to open the **Auditor Sheet**.
- 3 For each line, leave **No Issue** ticked if compliant. To record a finding, untick it and fill in **Issue Detail**, **Attachment** (photos or files; several allowed), **Suggested Action** and **Informed To**.
- 4 Click **Save**. The audit moves to *open issues* if any findings exist, otherwise it closes.

Large tables

The sheet has 12 columns. It scrolls sideways inside its card; the column headings stay visible while you scroll down.

6.3 Record corrective actions (Safety Officer)

- 1 Open the audit's **Verification Sheet** (**View** in the audit list).
- 2 Tick **Show Only Issues** to focus on findings.
- 3 For each issue enter the **corrective action**, **action by**, **action date**, **amount** spent and upload supporting documents.
- 4 Choose how it was resolved: **RFQ** (buy through a quotation — see next chapter), **Cash** or **Other**.
- 5 Click **Save** on the row. Attachments open in a new tab when clicked (images and PDFs) or download.

6.4 Close issues one by one (Safety Auditor)

- 1 Open the audit again. Each issue row shows a red **OPEN** or green **CLOSED** label in the **Status** column.

- 2 Choose **Closed** (or **Open** to reopen) and click **Update** .
- 3 When the last open issue is closed, the whole audit becomes **CLOSED** automatically. **Mark Closed** at the top still closes everything at once.

Only Safety Auditors can change an issue's status.

Other users see the status as read-only ("Only audit officers can change status").

7. Procurement for corrective actions (RFQ)

When a fix needs a purchase (for example new fire extinguishers), the Safety Officer can request quotations.

- 1 On the verification sheet, choose resolution mode **RFQ** and click **Open RFQ form** (or use **Send RFQ** on the Safety Audits page).
- 2 Enter the item, details, quantity and unit, needed-by date, shipping/payment/other terms and the supplier emails (recipients). Save.
- 3 Suppliers open **Supplier RFQs**, enter their email, click **Load My RFQs**, then submit a quote: price, shipping cost, tax, discount, total, arrival date and terms.
- 4 On the **Quote Dashboard** (Safety Audits page) compare quotes (filter by status, supplier, amount; sort), then **Approve** one and give it a PO number.
- 5 Track delivery (status *Delivered*) and record the supplier's **invoice** (number, subtotal, tax, total, attachment).

8. HR & Payroll

Open **HR & Payroll** in the header. The sub-toolbar shows: Job Posting, List of Jobs, Search Applicants, Shortlisted, Add New Employee, Generate Salary, Attendance, Advance Salary, Taxes.

8.1 Recruitment

- 1 **Job Posting:** enter job title, department, location, employment type, salary range, deadline, description, required and desired qualifications, diversity and equal-opportunity statements. **Save**.
- 2 **List of Jobs:** view, edit or delete postings.
- 3 Candidates apply through the public **Application Form** (name, email, phone, address, CV, LinkedIn, portfolio, work authorisation, start date, cover letter). HR can also enter an application in **Search Applicants** → **New Application**.
- 4 **Search Applicants:** filter by job or name, open a candidate and shortlist them with interview details (date, time, type, interviewer, reasons).
- 5 **Shortlisted:** record the **Candidate Evaluation** (technical, teamwork, leadership, problem-solving, communication, tests, agenda, recommendation: Hired / Not Hired / Further consideration) and issue an **Offer Letter** (job title, employment type, benefits...).

8.2 Employees

Add New Employee has three tabs; click **Save** to store all of them:

- **Add New Employee:** name, email, active, country/state/city, address, phone, department, employee type, ID numbers, dates, next of kin and other personal details.
- **Totals:** month/quarter/year-to-date gross and tax amounts. Amounts entered here **override** the tax profile for that employee.
- **Payroll Details:** salary or hourly rate, pay type and frequency, allowances, deductions, filing status, and the switches **Apply Federal Income Tax** and **FICA/EOBI** (untick to exempt this employee from income tax or social-security contributions).

8.3 Payroll taxes (Taxes tab)

HR is responsible for correct taxes.

Tax law differs by country and changes every year. ComplytEX does not ship any country's rates: HR must enter the rules from the official tax authority's tables and verify them. A banner on the HR pages warns when the setup is missing or unverified.

- 1 Open **Taxes** and click **+ New Tax Profile**.
- 2 Enter a name (e.g. "Pakistan FY 2026-27"), country, currency, **effective from/to** dates, and the official source you used.

- 3 Add rules with **+ Add Rule**. For each rule choose a category (Income tax, Social security/pension, Other), who pays (Employee — deducted, or Employer — company cost) and the method:
 - **Annual slabs** — progressive income tax. For each slab enter annual income *from, to* (blank = no limit), a *fixed* tax and a *rate %* on the amount above “from”. The system taxes monthly gross × 12 and divides by 12.
 - **Percent of gross** — a rate % of monthly gross, with optional maximum wage and maximum amount.
 - **Fixed monthly** — a flat monthly amount (e.g. a fixed contribution).
- 4 Type a sample salary in **Test with monthly gross** and click **Calculate** to check the result.
- 5 **Save Profile**, then review every rate and click **Verify**. Only HR managers and Owners can create, edit or verify profiles. **Editing a profile removes its verification.**

8.4 Generate salary (monthly payroll)

- 1 Open **Generate Salary**, choose the month and year and click **Preview Payroll**.
- 2 Check each employee's basic salary, tax, FICA/EOBI, deductions, net pay, **employer tax** and **tax source** (Tax profile, Manual override or None). Hover the tax amount to see the breakdown.
- 3 Tick “*I confirm the tax setup and every employee's tax amounts above are correct for this period...*”.
- 4 Click **Generate Payroll & Post to AP**. One Accounts Payable invoice is created per employee for their net pay.

Each month can be generated only once.

If a month was already generated, the preview shows when and by whom, and the Generate button stays disabled. This prevents duplicate salary payables and double advance deductions.

8.5 Advance salary

An employee can receive part of their salary in advance and repay it from later payslips.

- 1 Open **Advance Salary**. Employees request for themselves; HR can also choose any employee.
- 2 Enter the **amount**, the number of **installments** (1–24), the **first deduction month** and a reason. The monthly deduction is shown before you submit. Click **Submit request**.
- 3 An HR manager reviews the request and clicks **Approve**, or enters a note and clicks **Reject**. **Nobody can approve their own advance** — another HR manager or the Owner must.
- 4 On approval a payable “Salary advance #...” is created in Accounting, so Accounts can pay the money to the employee.
- 5 From the first deduction month, payroll deducts one installment each month (never more than the pay available) and shows it in the **Advance Deduction** column. The request shows **Recovered** and **Outstanding** amounts and becomes **Repaid** when settled.
- 6 You can **Cancel** your own request while it is still pending.

9. Attendance

Attendance is recorded with your **face** and your **location**. Each check-in asks you to turn your head (a liveness check), so a photo or video of you cannot be used by someone else. Every refused attempt is recorded with a photo for HR.

9.1 Employees: check in or out

- 1 Make sure HR has enrolled your face (once).
- 2 On your phone, sign in and tap  **Check-in** in the header (it opens a full page). Allow **camera** and **location** when asked.
- 3 Tap **Start** to turn on the camera and place your face in the oval.
- 4 Tap **Check in / out** and follow the prompts: **Look straight** → **Turn your head to your LEFT** (or RIGHT, as the arrow shows) → **Look straight again**.
- 5 You see **✓ Checked IN** or **✓ Checked OUT** with the time. The system alternates In and Out automatically.

For a smooth check-in

Good light on your face, only you in the picture, phone at arm's length, and be at your work site. You cannot check in twice within a couple of minutes.

Message	What to do
Your face is not enrolled yet	Ask HR to enroll you.
Location is required / permission denied	Allow location for the site in your browser settings and try again.
You are not at a registered work site	Check in at the site. Move outdoors if GPS is weak.
The head-turn was not detected / turned the wrong way	Turn your head clearly in the direction of the arrow.
More than one face is in the picture	Make sure nobody else is visible.
Looks like a photo or screen	Use your live face, not a picture.
Recorded, but sent to HR for review	Nothing; HR will check it (for example a weak match or a new phone).

9.2 Kiosk at the gate

A tablet at the entrance can run **kiosk mode** (HR → Attendance → **Open kiosk mode**). It must be signed in with an HR account or an account whose role has the **ATTENDANCE_KIOSK** permission. Employees step up, tap **Check in / out**, follow the prompts and are recognised by face; their name and In/Out are shown, then the screen resets.

9.3 HR: the Attendance page

Open **HR & Payroll → Attendance**.

- 1 **Sites & rules — set up first.** Stand at the site, click **Use my location** , name the site, choose a radius (default 150 m) and **Add site** . Adjust rules if needed: face match needed (default 0.62), review below (0.70), liveness needed (0.50), maximum GPS accuracy (100 m), minutes between check-ins (2), photo retention (90 days), and whether to refuse check-ins outside a site.
- 2 **Face enrollment.** With the employee present, click **Enroll** (opens a new tab). Tick the consent box after explaining it to the employee, **Start camera** , ask them to look straight, and click **Take photos & enroll** . One face can only be enrolled for one employee. Use **Re-enroll** or **Remove** as needed.
- 3 **Daily register.** Choose a date to see who is present, absent or flagged, with first-in and last-out times and enrollment status.
- 4 **Review.** Flagged check-ins show the check-in photo next to the enrolled photo, the reasons, scores and a map link. Click **Approve** , or enter a note and click **Reject** .
- 5 **Refused attempts.** Every blocked attempt with photo, reason and location — use it to spot attempted false attendance.

Tuning

Thresholds were set from test images. During the first weeks, review flagged entries and adjust the rules if genuine employees are flagged too often or refused.

10. Accounting

Open **Accounting** in the header.

10.1 Dashboard

Shows today's AP and AR, total bank balance, and lists of AP Pending, AP Approved, AP Paid, AR Pending and AR Received. Create invoices from here with **New AP Invoice** and **New AR Invoice** (order/job ID, product, supplier or customer, due date, amount, notes, attachment).

10.2 Accounts Payable (what you owe)

- 1 Payables come from manual AP invoices, payroll, CRM procurement orders and asset purchases.
- 2 Open **Payables**, filter Pending / Approved / Paid / All.
- 3 **Approve** a pending invoice, then **Pay**: choose the bank, amount, reference/slip number, receipt URL and notes, and click **Pay Now**. The bank balance is reduced.

10.3 Accounts Receivable (what customers owe)

Open **Receivables**. Optionally select an order/invoice to auto-fill the customer, reference and amount; choose the bank and click **Record**.

10.4 Banks, deposits, transfers and petty cash

- **Banks:** add a bank (name, account title, number, opening balance) and see balances.
- **Bank Deposit / Accounts Balance:** record deposits with slip number and attachment.
- **Bank Transfer:** move money between your banks with a reference.
- **Petty Cash:** withdraw cash for a purpose and quantity from a bank.
- **Bank Statement, Bank Deposit Summary and Received / Paid:** review and export to CSV.
- **Chart of Accounts:** create accounts by type (Asset, Liability, Equity, Revenue, Expense, Other) with number, name and notes.

11. CRM

Open **CRM** in the header. The **CRM dashboard** shows the end-to-end flow *Lead → Order → Production/Purchase → Shipped → Accounting*, with totals and quick actions.

11.1 Companies and contacts

- 1 **Add Contact:** company name and type (Buyer, Manufacturer, Supplier, Other), details, categories, source, product, HS code, phones, WhatsApp, website, address, NTN, social links.
- 2 Add contact persons with **Add Contact Person**.
- 3 **Business cards:** upload a picture of a visiting card; the text is read automatically and a company/contact is created.
- 4 **Search Contacts:** search by company, city or state, filter by type and status (Lead, Account), export to Excel.

11.2 Leads

Lead Management shows a pipeline (New, Contacted, Qualified, Proposal, Negotiation, Won) and a list view with totals, pipeline value, conversion rate and average deal. Add a lead with name, company, email, phone, status, estimated value, source and notes.

11.3 Orders

- 1 Click **Create New Order** and choose **Sales Order (→ AR)** or **Procurement Order (→ AP)**.
- 2 Enter the customer/vendor, contact, email, address and items (description, quantity, unit price), tax % and status (Draft → Pending Approval → Approved → In Production → Ready to Ship → Shipped → Delivered).
- 3 Use the order actions to **ship**, and to create the **AR** (sales) or **AP** (procurement) invoice in Accounting.

11.4 Communication

- **Phone Notes:** customer, contact, number, call type (Incoming/Outgoing/Missed), date/time, customer journey stage, sales pitch, notes, follow-up date.
- **Appointments:** company, date/time and agenda.
- **Segments:** groups of companies for targeting; **Manage Companies** to add or remove members.
- **Email Campaigns, Mailbox** and **Compose:** send and review emails.
- **Chat:** start a conversation with colleagues (subject and participants) and exchange messages.

Catalog, Inventory and Webinars pages are placeholders ("coming soon").

12. Tasks, support and other tools

- **Tasks / Calendar:** pick a date, click [+ New Task](#), enter start/end, title, description, image, priority (Low/Normal/High), assignee, note and repeat (daily/weekly/monthly). Tasks are saved for your company only.
- **Support:** create a ticket (subject and description), see your tickets and their status, and reply.
- **AI Analyst (Prompt Manager):** save, search, filter and delete reusable prompts by category.
- **Billing & Credits:** choose a plan — **Basic \$29/month**, **Professional \$79/month**, **Enterprise \$199/month** — or buy AI credit packs (100 to 1,500 credits). Payment is handled by Stripe; [Manage Subscription](#) opens the Stripe portal.
- **Report** and **Tracking** currently show sample layouts and are not yet connected to live data.

13. Security and good practice

- Use a strong, private password. Never share accounts — attendance and audit records are tied to who you are.
- Sign out on shared computers (initials → **Sign out**).
- Owners: give each person only the role they need. Only HR roles can change taxes or enroll faces; only Safety Auditors can close audit issues.
- Face data: the system stores a face template and small photos; check-in photos are deleted after the retention period. Record employee consent at enrollment and remove enrollments when people leave.
- Each company sees only its own data. If you ever see another company's information, report it to your administrator immediately.

14. Troubleshooting and FAQ

Problem	Solution
"Failed to load...: unauthorized", or my initials show "SS"	Your sign-in has expired. Sign in again; you return to the same page.
A page looks old after an update	Press Ctrl + F5 to reload without cache.
Camera or location does not start	Use HTTPS (the normal address), allow the permission in the browser, and close other apps using the camera.
Generate Payroll is greyed out	Set up and verify a tax profile covering that month, load the preview, then tick the confirmation box. If the month was already generated, it cannot be generated again.
I can't see a module icon	Icons are shown by role. Ask the Owner to add the role you need.
I can't approve an advance	You cannot approve your own request; another HR manager or the Owner must.
I cannot change an audit issue's status	Only Safety Auditors can. Ask the auditor.
An attachment does not open	Allow pop-ups for the site; otherwise the file downloads instead.
Verification email not received	Check spam; ask your administrator to verify your account manually.

15. Glossary

Tenant / company	Your organisation's private workspace.
Role / permission	What a user may see and do (e.g. MODULE_MANAGE_HR).
USC-Safe	Unified safety and compliance checklist programme.
DSA	Detailed Structural Assessment.
Corrective action	What was done to fix an audit finding.
RFQ / Quote / PO	Request for quotation; supplier's offer; purchase order number on approval.
AP / AR	Accounts Payable (you owe) / Accounts Receivable (owed to you).
Tax profile	Your country's payroll tax rules for a period, verified by HR.
EOBI / FICA	Social-security contributions (Pakistan / United States).
Liveness check	The head-turn step proving a live person is in front of the camera.
Geofence	The circle around a work site inside which check-ins are accepted.
Kiosk mode	Shared gate device that recognises employees by face.
WIP	Work-in-progress list of the tabs you opened.
