1. About this document

This document describes how work flows through ComplytEX: who does what, in which order, which screen they use, and what the system decides automatically. Each workflow has a diagram, the steps in plain language, and the rules the system enforces.

1.1 Diagram key

1.2 Roles

Role	Responsibilities in these workflows
Owner	Registers the company, sets up the business, creates roles and assigns people; has every permission.
Safety Officer	Maintains checklists, records incidents, grievances and training, plans audits, records corrective actions, raises RFQs.
Safety Auditor	Performs audits independently, records findings, decides when each issue is closed.
HR Manager	Recruitment, employee records, payroll taxes and payroll runs, face enrollment, attendance review.
Employee	Checks in and out; applies for jobs (applicants).
Accounts	Approves and pays payables, records receipts, manages banks.
Sales / Procurement	Leads, orders, customer communication.
Supplier	Responds to RFQs with quotes, delivers, invoices.

2. Company onboarding and access

2.1 Sign-in decision flow

Role	Start page
Safety Officer / Safety Office	Safety Officer dashboard
Safety Auditor	Safety Auditor dashboard
Inspection, Buyer, Supplier, Designer	Role portal
Anyone else (Owner, HR...)	Dashboard

Session rule: sessions last 7 days. When a session ends, any page sends the user to sign in and returns them to the same page afterwards.

3. Safety checklist maintenance

The Safety Officer keeps the company's master checklists current. These answers become the question list of every audit planned afterwards.

Snapshot rule

Planning an audit copies the current answers. Later checklist edits never change audits already planned, so audit evidence stays stable.

4. Safety audit lifecycle

4.1 Audit statuses

An audit with no findings goes straight from Planned to Closed. Closing the last open issue closes the audit automatically.

4.2 Swimlane

Safety Officer	System	Safety Auditor	Supplier
1 Plan audit: name, type(s), company, date			
	2 Copy current checklist answers as audit items; status Planned		
		3 Open "New Audits" → Details; inspect each line	
		4 Untick "No Issue" for findings; add details, photos, suggested action, informed-to; Save	
	5 Findings? → Open issues · none → Closed		
6 Verification sheet: corrective action, by, date, amount, documents; mode RFQ / Cash / Other			
7 If RFQ: send RFQ to suppliers			8 Submit quote
9 Approve quote → PO; record delivery and invoice	10 Status Corrective submitted		
		11 Verify each fix; set issue Closed (or reopen)	
	12 All issues closed → audit Closed; certificate link available		

4.3 Rules enforced

- Only users with the **Safety Auditor** (or Audit Officer) role can change an issue's status; others' status changes are ignored.

- Saving the auditor sheet keeps each line's identity, so corrective-action history is never lost.
- Corrective actions are kept as history; the newest one per issue is current.
- Every company sees only its own audits.

5. Corrective-action procurement (RFQ to invoice)

6. Incidents and grievances

Incident

Grievance

Training sessions follow a simple record flow: plan (name, relates to, date, trainer) → hold → record attendees → export CSV as evidence.

7. Recruitment to employee

8. Payroll taxes and monthly payroll

8.1 Tax profile lifecycle

8.2 Monthly payroll

Situation	Tax used
Employee has manual amounts in Totals / Pay Details	Manual amounts ("Manual override")
Otherwise	Verified tax profile ("Tax profile")
Employee's income-tax switch off	Income-tax rules skipped
Employee's FICA/EOBI switch off	Social-security rules skipped
No profile	Nothing withheld — payroll blocked

Run each month once

Generating the same month again creates duplicate payables.

9. Face attendance

9.1 Setup and enrollment (once)

9.2 Check-in decision flow

9.3 HR review loop

Data retention: check-in photos are deleted after the retention period (default 90 days) unless still waiting for review.

10. CRM: lead to cash and procure to pay

11. Accounting flows

11.1 Accounts Payable

Sources of payables	Accounts	System
Manual AP invoice · payroll · CRM procurement order · asset purchase with a price		1 Invoice created: Pending
	2 Review and Approve	Status Approved
	3 Pay: bank, amount, slip/reference, receipt	4 Debit entry in bank ledger; status Paid; balance reduced

11.2 Accounts Receivable and banking

- **Receivable:** AR invoice (manual or from a sales order) → *Record* receipt to a bank → credit entry in the ledger → status Received.
- **Deposit:** bank, amount, slip number, attachment → credit entry.
- **Transfer:** from bank → to bank with reference → debit and credit entries.
- **Petty cash:** purpose, quantity, amount withdrawn from a bank → debit entry.
- Statements, deposit summary and received/paid lists read from the ledger and export to CSV.

12. Business setup and assets

13. Support, tasks and documents

Support ticket

Safety Agent document

Tasks: create on a date (start/end, priority, assignee, repeat) → appears in the planner → updated or deleted by the team.

14. Roles and responsibilities matrix

R = does the work · A = approves / decides · C = consulted · I = informed / views.

Activity	Owner	Safety Officer	Safety Auditor	HR	Accounts	Supplier	Employee
Company setup & roles	R/A	I		C			
Maintain checklists	I	R	I				
Plan audit	I	R	I				
Record findings		I	R				
Corrective actions	I	R	C		C		
Close audit issues	I	I	R/A				
RFQ / quotes	A	R			I	R	
Tax profile	A			R/A	C		
Monthly payroll	A			R	R (pay)		I
Face enrollment				R			C (consent)
Check in / out				I			R
Attendance review	I			R/A			
Pay AP / record AR	A				R
